

Thank you, for your purchase of the Rain Goddess Cloud™

What's included:

- 3/4 brass spigot
- 1 1/2 PVC overflow
- Discharge plug
- Debris Screen and Screws (7)

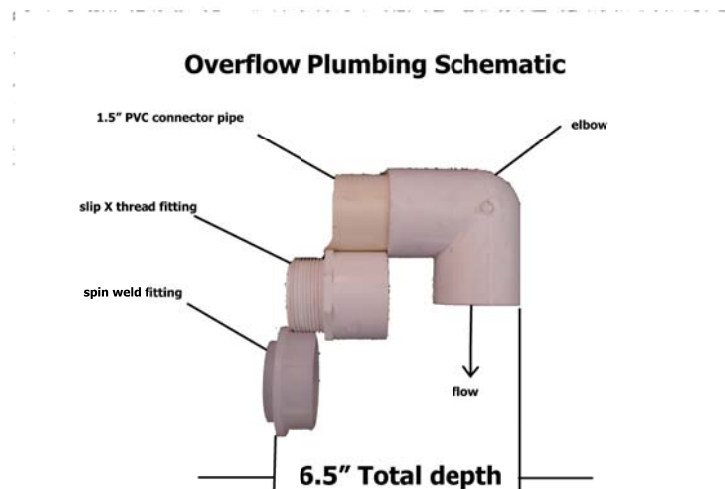

There are several items you will need to set-up your Cloud for the first time:

- PVC Glue
- Hacksaw (to cut your rain gutter downspout)
- Flexible hose or PVC pipe

Setting up your Rain Goddess Cloud- **Please make sure you remove your face-plate during the set-up process to avoid damaging it.**

Overflow Set-up:

- Use PVC glue to permanently connect your fittings.
- Measure the height of your Cloud from the ground and cut your flexible hose or pvc pipe to the desired height and attached to overflow.

Once the overflow is set-up, you are ready to place your Rain Goddess Cloud under the downspout.

- Select the desired height (you may want to place your Cloud on bricks)
- Measure your downspout and cut the downspout to the desired height.
- If necessary attach an elbow to match the opening at the top of your Cloud.

Slid your face-plate in and your set-up is now complete! To access the spigot, simply slide the face-plate off. Remember **Do Not Drink** the collected rain water it is only for your garden.
